

Company profile SEW-EURODRIVE

This is SEW-EURODRIVE

As a market leader in drive and automation technology, SEW-EURODRIVE moves applications, processes, systems, and machinery in virtually every sector. With our approximately 21 000-strong workforce, we are playing a key role in shaping the future of drive technology, and our customers' future – and we have been doing that for over 90 years. SEW-EURODRIVE has been an owner-operated family enterprise since it was established in 1931, and it is still based in Bruchsal, not far from Karlsruhe in Germany.

Our solutions can be found all over the world in scenarios ranging from the fast, dynamic, and highly accurate applications found in discrete manufacturing, to the large and powerful applications typical of the raw materials industry and container terminals, not to mention continuous and logistical processes. Countless conveyor belts, packaging machines, bottling plants, logistics centers, gravel plants, cable cars, airport baggage conveyors, and much more besides would grind to a halt without the drive technology and services provided by SEW-EURODRIVE.

→ Always close to our customers

We are represented on every continent in the world. Our widespread worldwide customer support and service network ensures that our customers never have to wait long for spare parts, repairs, and professional on-site advice.

→ Responsible and sustainable

Sustainability is second nature at SEW-EURODRIVE. We focus on six key areas in particular – people, products and services, supply and raw material chains, production, business processes, and, last but not least, ethics and governance. We are working hard to achieve the goal of climate neutrality, which the Federal Republic of Germany has brought forward to 2045.

Everything from a single source

Our range of drive technology products, solutions, and services is one of the most extensive and comprehensive on the market.

Our unique modular concept for drive and automation technology offers millions of potential combinations, which is why it can always deliver the ideal solution for countless applications in virtually any industry.

SEW-EURODRIVE supports customers every step of the way from concept development and planning to the implementation of their requirements, including fully comprehensive solutions for machine automation and for a modular Industry 4.0 factory:

- Gearmotors, gear units and motors
- Industrial gear units for heavy loads
- MOVI-C® modular automation system
- Energy efficiency up to IE5
- Decentralized technology
- Solutions for machine automation
- Software and software modules
- Automation solutions for smart factories

No matter how big the project is or how complex the requirements are, we want to give our customers exactly what they need, when they need it. We aim to offer the best support possible and, on request, deliver a fully comprehensive carefree service package that spans the entire system life cycle.
